

# Target CPI + 6%

Return Date: 2020/12/31

South African Rand

## Local Manager Commentary

December saw all major South African asset classes outperform. This is due to the overall market optimism following a Biden presidential victory in the US, as well as the start of Covid-19 vaccine rollouts in developed nations. Optimism outweighed the idiosyncratic risks present in South Africa, with riskier assets outperforming the more stable assets. Property outperformed all other asset classes during December with a +13.7%, likely due to a combination of risk-on sentiment and the relative undervaluation of this long struggling asset class. Fixed Income (ALBI) continued its good performance for the year delivering +2.44% in the month. The Rand gained another 5.1% against the USD in the month to end the year only -4.69% down over 2020.

## Investment Objective & Strategy

Deliver a return equal to or greater than CPI + 6% p.a. over rolling five year periods while keeping the portfolio standard deviation as low as possible. Over any rolling three year period the portfolio should always deliver a positive return. The Portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. The portfolio will invest in funds that allow the manager to make as many of the asset allocation decisions as possible. Manager selection will balance momentum and value management styles. This portfolio is Regulation 28 compliant.

## Investment Growth

## Target CPI + 6% - Asset Allocation (SA)

## Target CPI + 6% - Portfolio Holdings

## Target CPI + 6% - Trailing Returns
