Local Manager Commentary

The month started with a firm risk-on mood in almost all markets, this saw a broad rise in SA asset prices. Some doubts about the bullish prospects did however set-in nearing month end as investors perceived a return to monetary policy normality sooner than expected, resulting in a late sell off. The ALSI retained much of its early gains +5.87% buoyed by its large weight in resource stocks, which in turn were supported by recovering commodity prices. The poorest performing South African asset class was bonds at +0.06% over the period, while the best performer was listed property +8.60%.

Investment Objective & Strategy

Deliver a return equal to or greater than CPI + 2% p.a. over rolling two year periods with a Standard Deviation of less than 4%. Over any rolling one year period the portfolio should always deliver a positive return. The Portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. The portfolio will invest in funds that allow the manager to make as many of the asset allocation decisions as possible. Manager selection will balance growth and value management styles. This portfolio is Regulation 28 compliant.
