South African Rand

Local Manager Commentary

South African fixed income securities were the stand-out performers during May with declining yields and tightening credit spreads leading to a strong performance of +3.7%. The local equity market experienced a volatile bout of performance for most of the period, however a strong month end surge caused equities to end the month up +1.6%. Locally listed property showed weakness throughout the month amid a low growth & inflation environment that is not conducive to high performance of the asset class. The South African Rand ended the month at a value of R13.71 per USD, an appreciation of 5.2% in May.

Investment Objective & Strategy

Deliver a return equal to or greater than CPI + 6% p.a. over rolling five year periods while keeping the portfolio standard deviation as low as possible. Over any rolling three year period the portfolio should always deliver a positive return. The Portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. The portfolio will invest in funds that allow the manager to make as many of the asset allocation decisions as possible. Manager selection will balance momentum and value management styles. This portfolio is Regulation 28 compliant.
