South African Rand

## Local Manager Commentary

South African cash deposits, as measured by SteFi call deposits, outperformed all other major domestic asset classes. South African cash rates remain high relative to both developed market rates as well as emerging market peers, thus providing a valuable risk-management tool as well as a meaningful return. South African listed equities provided the largest detractor of major domestic asset classes, with falling metal prices hurting the resources sector and healthcare stocks delivering significant returns over September.

## Investment Objective & Strategy

Deliver a return equal to or greater than CPI + 2% p.a. over rolling two year periods with a Standard Deviation of less than 4%. Over any rolling one year period the portfolio should always deliver a positive return. The Portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. The portfolio will invest in funds that allow the manager to make as many of the asset allocation decisions as possible. Manager selection will balance growth and value management styles. This portfolio is Regulation 28 compliant.
