Return Date: 2021/10/31

US Dollar

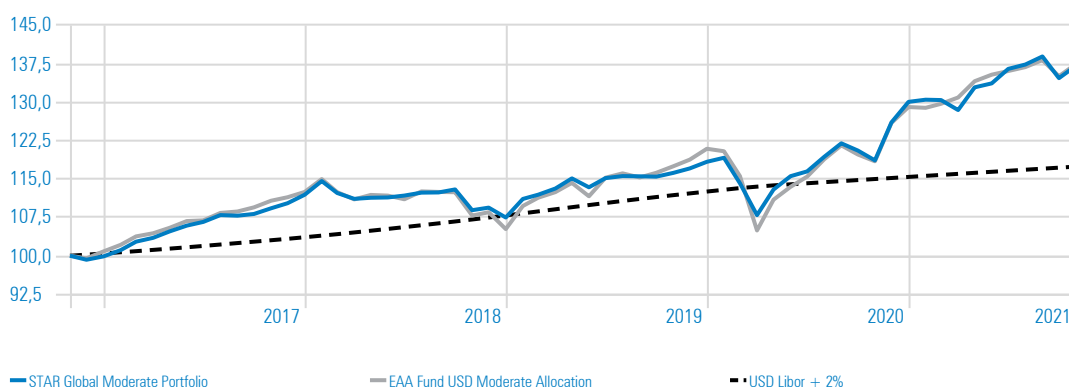

## Global Manager Commentary

Global Property indices continue to surpass expectations and outperform other major asset classes, global listed property assets returned 6.5% in October and has also been the top performing global asset class this year and over the trailing 1-year period. Global fixed income was the worst performing global major asset class in October, detracting (0.3%) over the month. The fixed rate nature of the financial instruments in this category means that their prices are heavily influenced by global policy rates as well as expectations of policy changes. It is no wonder then that the asset class underperformed in the month as major central banks indicated that they may start tapering asset purchase schemes in the near future.

## Investment Objective & Strategy

Deliver a return equal to or greater than USD LIBOR + 2% over rolling five year periods. Over any rolling three year period the portfolio should always deliver a positive return. Portfolio returns will be generated through interest income, dividend income and capital growth. The portfolio benchmark is the median return of the EAA Fund USD Moderate Allocation category. The portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. Where possible underlying funds will be given as many of the underlying asset allocation decisions as possible.
