

# STAR Global Moderate Portfolio

Return Date: 2023/01/31

US Dollar

## Global Manager Commentary

Global markets started the year on the front foot following a selloff late in December. The current environment has pushed the MSCI ACWI up 7.39% in January. The MSCI Emerging Markets outperformed the MSCI Developed Market for a third straight month returning 7.91% vs. 7.19%, the main contributor being that China, the second largest economy in the world has reopened for, production, exports and imports. US inflation dropped for a sixth consecutive month, a sign that the Fed's aggressive interest rate-raising approach is working. Inflation peaked in June 2022 at 9.00%, then fell to end the year at 6.50%.

## Investment Objective & Strategy

Deliver a return equal to or greater than USD LIBOR + 2% over rolling five year periods. Over any rolling three year period the portfolio should always deliver a positive return. Portfolio returns will be generated through interest income, dividend income and capital growth. The portfolio benchmark is the median return of the EAA Fund USD Moderate Allocation category. The portfolio is a Multi-Manager solution and will comprise at least two underlying funds and ideally a maximum of six underlying funds. Fund selection will be biased towards funds that have high Sortino Ratios, low downside expectations and have been managed through significant negative equity market conditions. Where possible underlying funds will be given as many of the underlying asset allocation decisions as possible.
